

What is claimed is:

1. Convertible, comprising
a roof which is movable between a closed position covering a passenger compartment and an opened position lowered into a rear roof storage space,
a trunk lid mounted to swing upward at a forward edge to clear a through opening for the roof to be lowered into the roof storage space,
a covering which is movably supported on the trunk lid to move between a front position forward of the trunk lid with the roof opened and a rear lowered position under the trunk lid with the roof closed, and
a shelf mounted to move between an operational raised position with the roof in the closed position and an inoperative lowered position at a front end of the roof storage space with the roof in the opened position.
2. Convertible as claimed in claim 1, wherein the shelf, in its lowered position, is located adjacent to a partition in front of the roof storage space.
3. Convertible as claimed in claim 1, wherein the shelf is mounted to swing down around a front pivot axis into its lowered position.
4. Convertible as claimed in claim 1, wherein the covering is supported on the trunk lid by a bearing means faces upward in front position and its lowered position..
5. Convertible as claimed in claim 4, wherein the bearing means comprises a four bar mechanism with a quadruple hinge and two pivot levers which swing in a lengthwise direction of the roof and each of which pivot around a respective pivot bearing axis fixed on the trunk lid and a respective pivot bearing axis fixed on the covering.
6. Convertible as claimed in claim 4, wherein the bearing means comprises a pivoting and sliding mechanism with a front pivot lever which pivotally supports a front section of the covering on the trunk lid, and with a lengthwise guide which is located on an underside of the

trunk lid, and wherein a support arm projects from a rear section of the covering and is supported to move and pivot in the lengthwise guide.

7. Convertible as claimed in claim 1, wherein the shelf and the covering are of essentially the same size.

8. Convertible as claimed in claim 1, further comprising a drive means for moving of at least one of the shelf and the covering, said drive means having one of a hydraulic unit, a hydraulic rotary drive or an electric motor.

9. Convertible as claimed in claim 1, further comprising a drive means with a drive motor and a cable or rack transmission.

10. Convertible as claimed in claim 1, wherein a drive for movement of at least one of the covering and the shelf is derived from a bearing mechanism of the trunk lid.
